

# Railway Reservation Program

## (Demo)

-By Python Adda

**NOTE: This is just a demo of the Original Railway Reservation Program created by Python Adda**

This Program has been created by **Python Adda** using **Python Programming Language**.

As in today's world, everything is online and digital but there are many people who don't know how to use devices properly. People have trouble booking tickets online and with secure payment.

This project is a small initiative to help people book tickets online easier and more interactively. It will make booking tickets easier. To make online ticket booking more adaptable and easier to understand for people who are not good in operating systems, by the use of images and other more readable things.

We have used GUI (Graphical User Interface) so it is easier to understand and the Databases can be reset by admins at their will. This Program uses **tkinter** module for GUI and **mysql.connector** module for Database Connection.

For source code and other details of this project you must contact to Python Adda.
